JUAN IGNACIO HOTZ

FULL STACK WEB DEVELOPMENT

ABOUT

I am a Full Stack Web Developer, very passionate about everything related to software, and always looking for new challenges, and new technologies to learn and to keep improving. My goal is to make a better world and help people through technology and software to make their lives easier.

WORKING EXPERIENCE

LA MONTAÑÉS E-COMMERCE

Full Stack Web Development - August 2021 - September 2021

An Argentinian beer e-commerce for a hand-made beer producer from La Villa de Paravachasca, Córdoba.

It was designed so the user can see all the products that the producer has to offer, as well as filter them by price, category, add them to the shopping cart, and to a favourites list.

The user also can register into the Web application, and login with his credentials, as well as with Facebook and Google. Once he is logged in, they can buy the products that are on the shopping cart, as well as leave a review once the purchase is complete.

The producer and owner of the e-commerce can log in as an administrator, and see all the orders, edit the products, add new ones, see all of the registered users, and if they want to, made an user an administrator. It was build using the MERN stack.

FULLTIMEFORCE

Back-End Development - January 2022 - Present

Implementation of the Twilio Messaging provider for SMS automation. This was used in a company's internal project.

Creation of a Web App that allows the company candidates to record themselves answering some questions, and then save these videos into AWS S3 to be watched in the future by the recruitment team.

EDUCATION

COMPUTER SCIENCE DEGREE

Universidad Nacional de San Juan | 2019 - Present

FULL STACK WEB DEVELOPMENT

Henry Bootcamp | 2021
